This is the nucleotide sequence encoding the Drosophila TATA-binding protein (TDP) associated factor (TAF) designated TAFIIIO. The protein is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol. wt. of 110 kD by SDS-PAGE, a calculated mol. wt. based on sequence of the gene of 99.4 kD and an estimated protein. The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TAFs. Purification of TFIID and separation of its components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresp. genes from lambda-gtil expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2072
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2724

AAT79604 encodes Drosophila TATA-binding protein associated factor (TAF) polypeptide, dTAFIIIO (mol. weight 110kD). TAF peptides derived from dTAFII30 alpha, dTAFII30 beta, dTAFII140, dTAFII60, dTAFII180, dTAFIII10, dTAFII150, their human equivalents and nucleic acids encoding them, are used to modulate transcription, including transcription initiation. TAFS are nuclear proteins involved in RNA polymerase I, II and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator, or DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a method of screening a candidate antifungal compound for interaction with essential proteins (EP) or for modulation of EP activity e.g fungal gene transcribtion. The proteins tested in the invention include RPC34, POP3, TFE2, NAB2, MPT1, MPT2, BOS1, POL30, RSA2, SQT1, MTW1, TFB1, SPC98, BFR2, RNA1, GCD7, SKI6, NIP1, LCP5, NCE103, ECC1, ONC2, CMS1, YPD1, TIM10 and SRB4 from S. cerevisiae, C. albicans and human homologues. The method involves contacting a culture with one or more test compounds and determining the effects on the growth or viability of the culture of cells which preferably comprises fungal cells or yeast cells. Preferably the identified compounds interact with, or modulate (preferably inhbit) activity of C. albicans EP. The inhibitor compounds identified by the method are useful for preventing or inhibiting fungal, particularly C. albicans growth in culture or in a mammal. The antifungal agents interact with essential fungal elements that can be used to treat fungal infection by preventing the growth and preferentially killing the fungal infection by preventing the growth and preferentially killing the fungal infection by preventing the protein cativity of mammallan homologues. This sequence encodes a target protein inced to test the antifungal compounds, described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

massenger RNAs that populate a (sub-)transcriptome, where the canonic present into present into present into present into present into present into propulate a (sub-)transcriptom units that populate a genome. The library comprises several oligonuclectides, each capable of hybridising selectively to a set of messenger RNAs transcribted from a given transcription unit of the genome. Which encodes one or more messenger RNA splice variants. The oligonuclectide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised minical libraries to detect transcripts of a sub-transcriptome under a particular biological or pathology specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a patient suffering from a particular disorder. ABN27253 to ABN259589 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New oligonucleotide libraries comprising oligonucleotides which selectively Mybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and developmental-specific genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the exemplification of the present invention.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes oligonucleotide libraries for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
Human spliced transcript detection oligonucleotide SEQ ID NO:6518.
                                                                              Human; mouse; rat; splice transcript; detection; RNA transcript; splice variant; transcriptome; oligonucleotide library; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed 'specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-interactions in higher eukaryotes for the development of insecticles, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1713 GCCTGCATCTTAGCAACAACTCTGAATTGGTTGGCACACTCATTCAGTCATGTAAAGAT 1772

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1653 GATGAGGATGACATCAATGATGTGACTTCTATGGCAGGGGTCAACCTTAATGAAGAAAAT 1712

MAY BE INVOLVED IN GAMETE RECOGNITION AND/OR
                                                                                                                                                                                                                                                                                                        - SUBUNIT: PROBABLY FORMS COVALENT OLIGOMERS.
- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN, EXCLUSIVELY ON THE APICAL REGION OF THE SPERM HEAD (BY SIMILARITY).
- TISSUE SPECIFICITY: IN TESTIS; PRIMARILY IN HAPLOID SPERMATIDS.
- DOMAIN: THE MAM DOMAINS PROBABLY MEDIATE SPERM ADHESION TO THE ZONA PELLUCIDA.
- DOMAIN: DURING SPERM MIGRATION TRROUGH THE REPRODUCTIVE TRACTS, THE MUCIN-LIKE DOMAIN MIGHT INHIBIT INAPPROPRIATE TRAPPING OF SPERMATOZOA OR PROMOTING ADHESION TO THE OVIDUCTAL ISTHMUS.
- DOMAIN: THE VWED DOMAINS 2 AND 3 MAY MEDIATE COVALENT OLIGOMERIZATION (BY SIMILARITY TO HUMAN INTESTINAL MUCIN MUC2).
- SIMILARITY: CONTAINS 4.5 WAFD DOMAINS.
